Step 1

1. How many documents are present in each collection?

   string=[s]"", stringstyle=, comment=[l]:, commentstyle=,

   ```
   c= {"ActiveBookings" : db.getCollection('ActiveBookings').fi
       "PermanentBookings" : db.getCollection('PermanentBooking
       "ActiveParkings" : db.getCollection('ActiveParkings').fi
       "PermanentParkings" : db.getCollection('PermanentParking
   ```

2. Why the number of documents in PermanentParkings and PermanentBooking is similar?

3. For which cities the system is collecting data?

4. When the collection started? What about the timezone of the timestamps?
